Current concepts of metabolic reprogramming of cancer cells are primarily based on experimental evidence obtained during the past three decades. Cancer metabolism is intimately linked to cancer cell metabolism and it can be seen as the direct result of changes in cell membrane transport and cell signalling. These metabolic modifications are adapted to maintain cancer cell growth and survival. This review will focus on the metabolic adaptations and the strategies developed by tumours to maintain growth and survival. It will describe the three main hallmarks of cancer, namely the ability of tumours to promote angiogenesis, to sustain their growth through proliferative signalling, and to evade apoptosis. Changes in metabolic pathways and the glucose metabolism in particular, and the changes in these pathways as a result of cancer, will be discussed in detail. Finally, the specific metabolic adaptations that are characteristic of different cancer sub-types will be reviewed.If you thought that the Chevrolet Bolt was underpowered, the rest of the world is thinking the same thing. The all-electric car just got a slight refresh, but now GM is calling it a new vehicle. The Bolt has been sold and leased as a 2016 model for almost two years now, and now it's finally ready for a minor refresh. The new 2019 Chevrolet Bolt, which will go on sale in the fall, has a revised exterior, a new electronic steering wheel with a touchpad, a new 10-inch display inside the steering wheel, and a powertrain update with an improved battery. DON'T MISS: 2019 Chevy Bolt EV: Electric car receives minor update, upgrades to drive unit, battery system The Chevy Bolt received a minor refresh back in January when the automaker introduced a new track-ready version of the Bolt EV. The all-electric car is now getting a new "Dynamic Performance" exterior that 2d92ce491b
